### **Web Press Pens Deals for Seven 4-color Towers**

Expedi Printing, in Brooklyn, New York has ordered three Quad-Stack 4+4 color printing units which will be incorporated into two presslines twinned together to produce one product. Twinned presslines are precisely spaced by Web Press engineers so that webs from one line can be guided (using angle bars) to the folder in a second line.

The Midland Tribune, in Offaly, Ireland, has also ordered 3 Quad-Stacks. These will be merged into existing equipment (5 perfecting units and 2 Quadra Color CIC units) to feed from either end into a central folder.

American Foothill Publishing, in Tujunga, California, has also purchased a Quad-Stack which adds additional 4 over 4 color capability to their existing Goss Community line.

Installation for all three presslines will take place in the second quarter of 2004.
