

## Quad-Stack™ /UV Hybrid Press Lines... A Viable Alternative to Sheetfed

*If you are going to Graph Expo, please stop by our booth (#5470) and check out the QUAD-STACK™. You'll find that it might offer you advantages for some of your high volume, 4/4 color printing that needs to be printed, folded, gathered, stitched, trimmed, addressed or otherwise finished and delivered to the Post Office today.*

Quad-Stack

Quad-Stack™ w/UV

2 Quad-Stacks™ w/UV

Imagine starting with a Jardis splicer to save money and time using roll stock. Then printing a finished size sheet of 22-3/4 x 35" from a web at 30,000 impressions per hour (4/4) with a sheeter for finished sheet goods AND a folder for signature work. Compare this to a sheet-fed 29" press at 15,000/hr perfected, or a 40" press at 12,000/hr perfected. The printing is perfected, four over four, UV ink, and cured through an On-Line Energy UV curing system so the work is ready for addressing, trimming, or any other bindery process immediately after it's off the press. The press is also equipped with an Essex Products Group Color Control Console to ensure quick color profile set-up and control. Many customers have startup waste of less than 200 impressions. That rivals sheet-feds in many cases.

**All this for less than \$1.3 million. Add a second Quad-Stack™, upgraded sheeter and second splicer for catalog work and still come in under \$2.0 million. Compare this to a sheet-fed 8-color perfecter equipped with UV.**

Also consider this. A single Quad-Stack™ is VERY compact. Approximately 9' deep, 10' wide and 8-1/2 feet tall (UV makes it 12'). Add in the splicer, folder, and sheeter and you're still well short of a sheet-fed perfecter and you have all the advantages of the extra production capabilities of a folder - in-line!

When you do the comparison, you'll agree that for many printers doing time critical mailing work the Quad-Stack™ is a better fit.

- **Less space - Quad-Stack™, splicer, folder, sheeter - approximately 40' in length.**
- **More Versatile - In-line folding, sheeter and UV.**
- **Faster - 30,000 per hour PERFECTED, and when you add the in-line folding ...!**
- **More economical - Buy paper by the roll, more impressions per hour, immediate turn-around to the bindery for other finishing.**

*Stop by and see us to learn more about this configuration as well as other offerings from Web Press Corp., Kent, WA, USA* **Graph Expo booth 5470**
